

JAVASCRIPT

Write a JS code to perform the following operation

Exercises: if/else statements

What number's bigger?

- Write a function named `greaterNum` that:
 - takes 2 arguments, both numbers.
 - returns whichever number is the greater (higher) number.
- Call that function 2 times with different number pairs, and log the output to make sure it works (e.g. "The greater number of 5 and 10 is 10.").

The Grade Assigner

- Write a function named `assignGrade` that:
 - takes 1 argument, a number score.
 - returns a grade for the score, either "A", "B", "C", "D", or "F".
- Call that function for a few different scores and log the result to make sure it works.

The Pluralizer

- Write a function named `pluralize` that:
 - takes 2 arguments, a noun and a number.
 - returns the number and pluralized form, like "5 cats" or "1 dog".
- Call that function for a few different scores and log the result to make sure it works.
- Bonus: Make it handle a few collective nouns like "sheep" and "geese".
